I removed personal information for the web version of my resume

---

Overview

I have 10 years of experience in the industry as a front-end and back-end developer, with expertise in database management and hosting. I'm highly proficient in JavaScript, PHP, MySQL, and NoSQL databases, with extensive experience in API development and working with frameworks like React, Angular, jQuery, CakePHP, and more. Additionally, I utilize AI to streamline repetitive tasks, and improving efficiency. I have successfully taken multiple projects from the planning phase to beta and live release. While confident in my abilities and the value I bring to any team, I am always eager to learn and grow as a developer

EXPERIENCE

ShipEarly

2023 – 2024 (contract)   Full Stack Developer
- Joined a small startup on a contract to help them grow
- Worked on their back end using Cake 2 PHP to develop a sales system that was integrated with salesforce
- Worked with Git, did code reviews and integrated it with Trello
- There was a lack of regular communication, and despite discussing the importance of communication and teamwork, t wasn't a focus. I decided this wasn't the place for me long-term.

Quillsoft

2017 - 2023   Developer
- Created and oversaw growth of the CRM system to ensure our tech team had all the data required to properly assist all our users
- Built a PWA of our main desktop application which has become one of our main apps sold to schools
- Developed a license management system that is currently integrated into all our applications and programs
- Implemented the most up to date encryption methods to keep data secure

| **Strategic**
Transitions Inc | 2012 – 2017 | Developer |

- I was hired straight out of college before I even graduated, in a class of about 127 they came to work with us on our final project and I was the only one hired
- Created and license management system and integrated it into the web applications and desktop programs
- Responsible for creating encryption for the user's data security
- Developed a customized CMS system from scratch to allow for quick changes of content on the website
- Wireframed, designed, and coded all the company's websites

NeXsys

| | 2011 | BPMS Administrator(Summer) |

- Created and license management system and integrated it into the web applications and desktop programs
- Responsible for creating encryption for the user's data security
- Developed a customized CMS system from scratch to allow for quick changes of content on the website
- Wireframed, designed, and coded all the company's websites

EDUCATION

| **Fanshawe College** | 2008-2011 | Interactive Media & Production |

- The program at Fanshawe had 2 years of general graphic design, video, game design, and mainly web/app development classes
- The 3rd year you picked a specialty; I chose web/app development but still have knowledge in the other areas which has been useful
- I did a project with Strategic Transitions Inc my final year in the program and was the only person hired; I was employed before I finished the program
- I also finished a year in a graphic design program but found I wanted to work more with web and coding that just design and switched to this course

SKILLS   Outgoing / Self-Driven / Accountable / Independant / Proactively identify new tasks / Collaborating with colleagues / Always learning
